DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with John A. Krause (Reg. No. 24, 613) on April 27, 2005.

3. The application has been amended as follows:
Claim 42, line 5, " a shift resistor " should read -- a shift register --.
Claim 43, line 2, " siad first " should read -- said first --.

4. In response to the Office action dated December 15, 2005 the Amendment has been received on April 16, 2005.

Claims 39-41 have been canceled.

Claim 42 has been amended.

Claims 42-44 are currently pending in this application.

Allowable Subject Matter

5. Claims 42-44 are allowed.

6. The following is an examiner's statement of reasons for allowance:

Claims 42-44 are allowed because prior art fails to teach or make obvious an X-ray detector comprising: first flexible circuit substrate means that mounts a shift resistor for driving the thin film transistors; and second flexible circuit substrate means which mounts an integrated circuit IC for detecting a signal from the photoelectric converter as claimed in claim 42. Claims 43 and 44 are allowed by virtue of their dependence.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mizutani et al. (US Patent 5,812,284) teaches an arrangement comprising switch units for transferring signals from individual photoelectric converting elements formed by thin-film transistors (TFTs) and a shift register for sequentially driving these transfer TFTs time serially formed on the same substrate but fails to teach flexible circuit substrate means that mounts a shift resistor for driving the thin film transistors; and second flexible circuit substrate means which mounts an integrated circuit IC for detecting a signal from the photoelectric converter.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Irakli Kiknadze whose telephone number is 571-272-2493. The examiner can normally be reached on 9:00- 5:30.
